

# MOBILE BANKING TOUCH ID

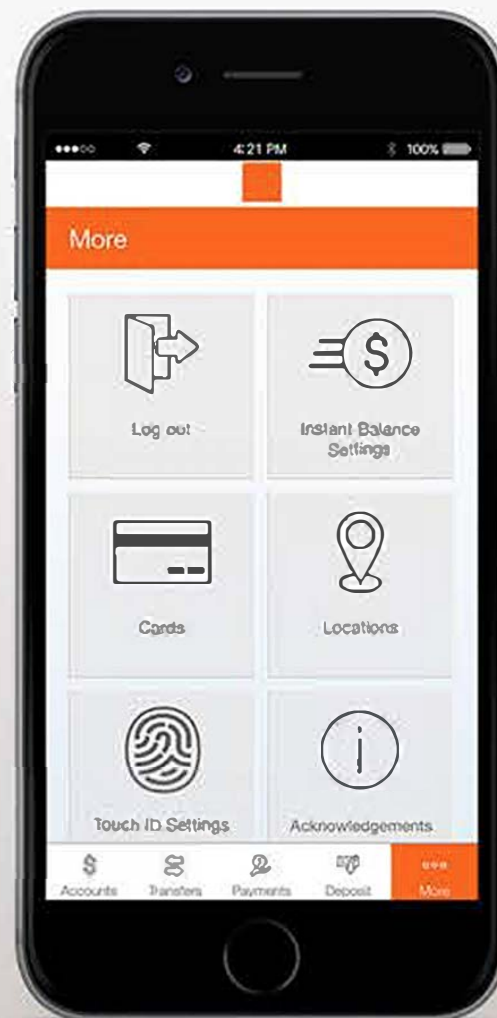

## USE YOUR FINGERPRINT TO SECURE & QUICKLY ACCESS MOBILE BANKING

When you launch the app, Touch ID will appear on the bottom left of the login screen. If you have not turned on the feature, instructions will be given to turn on Touch ID once you click on the Touch ID button from the log in screen. The instructions will have you set up at least one fingerprint on the device first. If the feature has already been turned on, print authentication will appear automatically from this screen.

You can enable Touch ID from the More menu.

Click to toggle on Touch ID.

Once you have enabled Touch ID, you will automatically be prompted for a fingerprint when the app is launched. For security reasons, you will be required to fully authenticate with your password when performing transactions that move funds (e.g., transfer money, pay bill, pay a person, etc.). A password will only be requested once per session.
